

Verifavia Shipping certifies the “Liberty performance monitoring and compliance SW” by Enerforce Solutions & Consulting for EU MRV use

Early in September 2017, Verifavia Shipping officially certified the “Liberty performance monitoring and compliance solution” in terms of the EU MRV Regulation.

Liberty performance monitoring and compliance solution is a complete operational tool for fleet performance employing KPIs measurements and also automatically detects the EU MRV applicable voyages (or parts of voyages) according to the guidelines of EU Commission while being in full accordance with the Regulation as it covers all types of vessels and includes all the possible voluntary fields. For maximum usability, Liberty is certified for all three fuel related out of the four available monitoring methods thus allowing our clients across the board to select their method of preference at their convenience.

Implemented on 1st July 2015, the shipping MRV regulation is now a pressing reality for more than 12,000 vessels visiting EU ports, with the first regulatory deadline of 31st August 2017 having just passed. Ship owners and operators of vessels exceeding 5,000 GT and operating in the EU now have until Dec 31st, 2017 for their ship-specific Monitoring Plans to be Assessed by an Accredited Verifier in order to be able to monitor and report carbon emissions, fuel consumption, and associated transport work as of Jan 1st, 2018.

Liberty performance and compliance solution users also have the option to use the system as a complete fleet management and hull & propeller performance solution, based on KPIs, indication graphs and benchmarking together with being compliant with the EU MRV Regulation. All advanced formulae and dynamic smart calculations are based on the Daily reporting figures in order to produce a set of useful information. Liberty helps the operator save time as it provides information of key importance very easily, while the same information can be further used for decision making and troubleshooting purposes. When it comes to cost efficiency, Liberty is a cloud-based software that requires no server installation or other equipment while keeping the user-input information to a minimum within a user-friendly environment.

Enerforce is committed to continuous improvement and as such all upcoming versions of Liberty shall include enhanced hull and propeller analysis and more reporting options in terms of new Regulations, such as the upcoming IMO FODCS.

Dimitris Tagalis, Managing Director, Enerforce Solutions and Consulting, said: “Our cooperation with Verifavia, in terms of the certification of the EU MRV function of our Liberty performance and compliance software, has proven to be a rewarding experience. The unique expertise of the whole team on ICT certification allowed us to finalize the development of Liberty in a quicker and more efficient manner and thus satisfy our growing customer demand.”

Nikolas Theodorou, Managing Director, Verifavia Shipping (Hellas), said: “We would like to thank everyone in the Enerforce Solutions & Consulting Ltd Team for their professionalism and impeccable cooperation until the successful conclusion of the Liberty Software certification while remaining committed in upholding the highest levels of expertise, diligence and service in providing globally accepted system certification.”

About Enerforce:

Enerforce is a Company established in 2015 eager to break through new grounds and create added value in The Shipping Industry. Enerforce is based in Cyprus and has an office in Greece to service its Greek clients. Enerforce was formed by Professionals in the Marine industry with more than 20 years experience, working closely with large and small operators. This broad experience led the developers to combine the practical problems, the strong analytical information in a very practical manner.

The latest software solution, Liberty Suite, is the product that can prove that the motto of Enerforce “keep things simple” is what is followed in practice.

About Verifavia Shipping:

Verifavia Shipping, and Verifavia Shipping Hellas which serves the Greece and Cyprus-based shipping market, strives to be the maritime industry's first choice for the provision of efficient, competitive, and flexible emissions verification information and services worldwide.

By combining its innovative approach and streamlined procedures with the technical expertise and industry knowledge of its team, Verifavia Shipping provides a top-class service that ensures its customers experience a smooth verification journey.
